

Care and Maintenance of your Atlantis waterproof SPC floors:

After installation, vacuum or use broom to pick up dry dust and loose debris from floor. This should be followed with damp (not wet) mop cleaning with water or pH neutral cleaners, to pick-up left over dust. Make sure not to use vacuum with hard bristles or beater brush.

DO NOT use steam cleaners. Pet (domestic cat and dog) urine and spills should be cleaned in timely manner (within 30 minutes) to avoid any damage to the flooring. Some pet urine, vomit and feces may be substantially acidic or alkaline. In that case, we recommend it to be cleaned immediately.

The floor may be cleaned by using just a damp (not wet) mop. In case where deeper or more thorough cleaning is required, we recommend using pH neutral cleaners without harsh chemicals. Do not use petroleum-based cleaners. Do not use any abrasive tools or pads as they may scratch the floor. Do not use any “mop and shine” products to clean the flooring.

Care should be taken in moving and placing appliances and furniture on the floor. All heavy appliances, furniture and any sharp objects touching the floor should have flooring surface protective pads under them. Hard Ball-type or wheel type casters can damage the floor and should be avoided. It is recommended not to drag furniture on the floor as it will likely cause scratches on the floor. Scratches or wear and tear are not covered under any floor warranty.

Mats should be used at all entrance points to avoid bringing in grit and damaging the floor. Long period of exposure to high temperatures and/or direct strong lighting from (such as the sun) must be avoided as it may damage the floor.

Proper care and maintenance will help you enjoy your Atlantis SPC plank flooring for a long time to come.
